HACKATHON PROJECT

AI-Powered Misinformation Detection and Verification

Verify before you share. Every verdict comes with its sources.

Team: [Team name] · Members: [Names]

EVIDENCE FIRST

A verdict is only as strong as the trail behind it.

Made with GAMMA

THE PROBLEM

Misinformation moves faster than certainty

People are asked to make a high-stakes judgment before they have the time or tools to verify it.

Fast reach

Misleading claims reach people daily across social and messaging apps.

Late corrections

Corrections often arrive after the claim has already spread.

Limited capacity

Most people lack the time or tools to fact-check.

Black-box answers

AI verdicts can ask users to trust a conclusion without showing why.

Made with GAMMA

THE PRODUCT PROMISE

We turn a suspicious claim into an explained verdict

Find reliable evidence, weigh it transparently, and explain the result in simple language.

01

Submit claim

Paste a claim that needs checking.

02

Find evidence

Search trusted sources that can support or challenge it.

03

Get explained verdict

See the outcome, confidence, and evidence trail in plain language.

Made with GAMMA

HOW IT WORKS

Five stages from claim to evidence-backed answer

01

Claim extraction

An LLM pulls out checkable facts and ignores opinions.

02

Evidence retrieval

Search is restricted to fact-check databases, news agencies, government, and WHO sites.

03

Stance classification

Sources are labeled supports, contradicts, or irrelevant, with the key sentence quoted.

04

Verdict

Supported, Contradicted, Mixed, or Inconclusive.

05

Explanation

Plain-language reasoning with source links.

The pipeline separates retrieval, judgment, and explanation so each step can be inspected.

Made with GAMMA

TRUST BY DESIGN

Trust is designed into every verdict

01 · RELIABLE EVIDENCE

Evidence has visible weight

- Trust tiers: official/primary > established news > other.
- The tier is visible in the UI.
- Higher tiers weigh more in the verdict.

02 · NO FALSE VERDICTS

No evidence is not “Fake”

- No evidence found = Inconclusive, never Fake.
- Contradicted requires a credible source that directly refutes the claim.
- A confidence indicator is always shown.

Made with GAMMA

THE DEMO

The demo makes the reasoning visible

VERIFY A CLAIM

“A suspicious claim appears here for review.”

VERDICT

Supported

Confidence shown with the answer.

TRUST TIER

Official / primary

EVIDENCE FOR

Key sentence supporting the claim.

Source link · Official / primary

EVIDENCE AGAINST

Key sentence challenging the claim.

Source link · Established news

THREE TEST CASES

True claim

Supported

Debunked claim

Contradicted

Brand-new obscure claim

Inconclusive

Made with GAMMA

BUILD PATH

Phase 1 proves the idea; the roadmap proves the path

STACK

Designed for a focused first build

Python · FastAPI/Streamlit

Claude API for extraction and stance classification

Domain-filtered search API

Card-based UI

ROADMAP

01 Phase 1: idea and design

Define the verification flow, trust rules, verdict states, and demo experience.

02 Phase 2: working prototype

Turn the designed flow into a usable prototype with the planned stack.

03 Final direction

Multilingual support, browser extension, and WhatsApp bot.

Made with GAMMA

THE TAKEAWAY

Don't trust AI blindly. Trust the evidence.

Everyday users can verify before sharing.

Students and families get a simpler fact-checking path.

Journalists get transparent evidence trails.

Transparency beats blind trust.
